After completing the hands-on exercises, you will be able to:

- Develop simple Java program using packages and objects.

Problem Statement:

Develop a class "*Rectangle*" inside a package "*com.hcl.shapes*". The class should have a method called *calculateArea()* which should print a message "***The Area of the rectangle is calculated using the formula length * breadth***". Develop another class "*AreaCalculator*" inside the package "*com.hcl.shapes*" add a main method which invokes the calculateArea of the rectangle object.

Output: The following message should be displayed in the console

*"The Area of the rectangle is calculated using the formula length * breadth"*
